**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 1-11 are allowed.
2. The following is an examiner's statement of reasons for allowance:

With respect to independent claim 1, the prior art fails to teach or fairly suggest an ion implanting apparatus comprising an analyzer unit and a vacuum gauge connected to said analyzing unit wherein the gauge has a magnetic field shield that comprises a plurality of magnetic shield plates, each extending around the vacuum gauge, and dielectric material interposed between the magnetic shield plates.

Regarding independent claim 7, the prior art fails to disclose or make obvious a combination of a vacuum gauge comprising a permanent magnet and a magnetic field shield that comprises a plurality of magnetic shield plates, each extending around the vacuum gauge, and dielectric material interposed between the magnetic shield plates.

Claims 2-6 and 8-11 are allowed by virtue of their dependency on claims 1 and 7 respectfully.

The main feature that separates the apparatus apart from the prior art is the use of a magnetic shield surrounding a vacuum gauge so that any external magnetic fields will not affect the accuracy of the gauge.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance"

***Relevant Prior Art***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Vella (US 20020125829) discusses use of magnetic shielding in a plasma generating chamber for an ion implantation system.

Yoshimura et al. (USPN 5414356) discuss magnetic shielding methods which can be applied to a flux meter using a magnetic shielding tube.

***Conclusion***
